

5 Ft Platform 2man

Parts Included	Legs
2- Base	4- 52 inches long
10- Cross members	4- 62 inches long
1- Ladder	
8- Legs	Cross Members
32- 2 ¼ inch bolts and nut	6- 76 1/4 inch long
24- 1 ¾ inch bolts and nuts	4- 70 1/2 inch long

1. When installing this to your box stand you will want to go ahead and clamp your 4 x 8 ft piece of plywood to the two bases and pre-drill your plywood to match up to your base.
2. Now you will need to put your piece of plywood into your box blind, there will be a lip at the bottom of each wall which holds your plywood into place. **Note: There will be some slack between your plywood and your box blind.**
3. Next you will need to tighten down your eight screws and nuts on the eight bottom corners and sides of your box blind to lock in your plywood.
4. Once this is done you will need to place your base underneath your box blind (making sure that your base with the two holes on the side is in line with the door (for ladder) and pull out the piece of plastic (lip) underneath the door wall to where you can put a bolt through to your plywood to your base.
5. Now that you have the base locked in place you will want to drill the plywood and base out so that your plastic lip is pre-drilled as well. After all these holes are pre-drilled, go ahead and place the nuts and bolts through these and tighten down, using the 2 ¼ inch bolts and nuts. Now your base is locked into your box blind
6. You are now ready to attach your eight legs. Insert the four legs that are not square at the top into the four outside corners. Then place the other four that are square at the top to the middle four metal posts
7. Now you are ready to attach your cross members. **Note: There are no cross members on the ladder side.** Take two cross members that are 76 1/4 inch long that are bent on the ends in the opposite direction and bolt them together in the middle using a 1 3/4 inch long then attach it to the end of the stand opposite from ladder side using 2 1/4 inch bolts. Now that this is all done you can attach the ladder to the base using 1 ¾ inch bolts and nuts to the opposite side.
8. Next you will take one 76 1/4 inch long cross member and one 70 1/2 inch cross member and bolt them together using 1 3/4 inch bolt. Look at the angle your cross members make and match them up to the right side of your tower. (You will have to look at the ends of the cross members and make sure that the angles are bent the same way at the top and bottom to match up with that sections.)
